What is SharePoint Online?

Microsoft SharePoint is a cloud-based service that helps organisations share and manage content, knowledge and applications to:

- Empower teamwork
- Quickly find information
- Seamlessly collaborate across the organisation

What's the Big Deal?

- SharePoint was previously a complex and costly system, run on local servers. Typically used by corporates.
- As with MS Exchange it's now included in your office 365 subscription, making it accessible and a no brainer to implement for SME and Mid-Market Businesses.
- No longer do we have the cost of the licensing, infrastructure or the need to build in high levels of redundancy ...

What can we do with SharePoint Online?

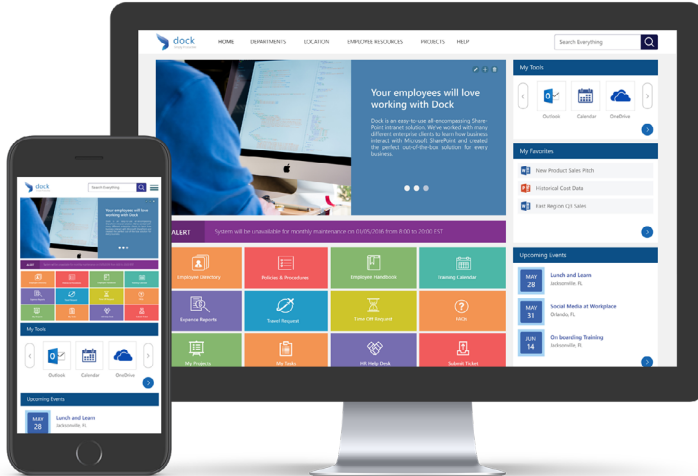

- Collaboration and sharing of information within the organisation
 - File and Folder Storage
 - External Access for staff
 - Secure data access for Guests and Contractors
 - There are a wealth of apps available in the app store
 - Creation of an intranet site
-

Breathe's SharePoint Strategy – The Business Hub Project

- 1 We create a central point of communication for the business. Like a hybrid between an ERP system and a modern day Intranet. Bringing everything together in your digital world. You may have heard the term Digital Workspace transformation!
- 2 We use SharePoint to drive our 'Next Generation IT Strategy'. Based on a Hybrid Network with a strong Cloud Services adoption. This means less hardware, more redundancy and less CAPEX long term.
- 3 Using the best of both on-premise IT and the Cloud.
- 4 We bring all departments together in a central location. Their apps and their data, documents and folders.
- 5 The Business Hub supports the IT Anywhere Strategy. In today's world, we need to be able to work from anywhere. This will not change after COVID-19.
- 6 Apps and specific documents that have a high level of use, are at your fingertips and no longer do you need to remember the URL's of Web Apps or files hidden behind a tree of sub folders on a server.
- 7 External access can be provided to external parties and controlled.
- 8 Integration with MS Teams and Exchange Calendars is available and can be shared across the business
- 9 Information can be disseminated across the business. Updates from HR, The Management Team or Training Initiatives from IT
- 10 We are able to wrap all this functionality up in a modern, intuitive interface, that's set as the default page on web browsers via group policy

All of this is available... at no additional cost for licensing or hardware? It's a No Brainer.

The Central Point of Contact for All Business Information

- ✓ Tying all departments together in a single digital work place
- ✓ The standard view when any employee opens their web browser
- ✓ Creates an intuitive graphical interface for all SharePoint Data held in the Cloud. Much more intuitive than server folders with sub folders and documents
- ✓ Can be used to show communications or a live feed, improving messages and comms across the business
- ✓ Team calendars can be made easily accessible
- ✓ The approach leverages all the functionality from the cloud apps in a single, easily accessible location. Including any Nokia tools accessed via a web browser
- ✓ It's available inside the business and from 'Anywhere else'

- 1 We start with a scoping meeting, to work out how we can optimise how your staff use the IT resources and access information.
- 2 The Designer and IT Consultant then will help design and brand your own Business Hub design.
- 3 Once completed, our Web and SharePoint engineers work together, to setup SharePoint, migrate any required data and integrate the Business Hub web front end.
- 4 The example above is our Business Hub Design.
- 5 Ask Lucy@breathetechnology.com, if you would like to see a live demo of another customer Hub design.

Next Steps?

Let's get together and have a conversation about how you could benefit from this new trend in IT.

It's an exciting concept and clever functionality!

Call or email lucy@breathetechnology to arrange a meeting with your Account Manager.
